

## **Reporting Period: October 25, 2025 to November 24, 2025.**

**Note:** Missing dates normally mean that the wind contributed to boats not going out to fish.

I have a NEW email, if you can send me any fishing news or pictures: [lyncurt0@gmail.com](mailto:lyncurt0@gmail.com)

In general, the water temperatures have slowly begun to rise from the very high 70s and low 80s dipping down to 75 in a few areas, mostly around Esteban and along the southwest shore of Tiburon. Checking the "[TempBreak.com](http://TempBreak.com)" site, the temperatures do vary daily as tides and winds create a variety of cooler areas, but are slowly dropping overall to below 75 degrees. One Dorado was caught off Turner trolling before our return to Kino and some big Jack Crevalle were also caught by trollers. Those two species have become more scarce with cooling temperatures. As of 11/23 the temperatures around the Midriff were all below 65-66 degrees after the last cold front passed.
